

Custom 2D Art on a 3D Printer

Goal

Using or designing a 2D image to make a 3D printed item.

Prerequisites

- TinkerCAD basics

Notice

Converting a drawing to a 3D model will result in a flat-like look. If you want to convert to a more “3D models”, you will need to import your .svg as a base and model it in Blender to further sculpt.

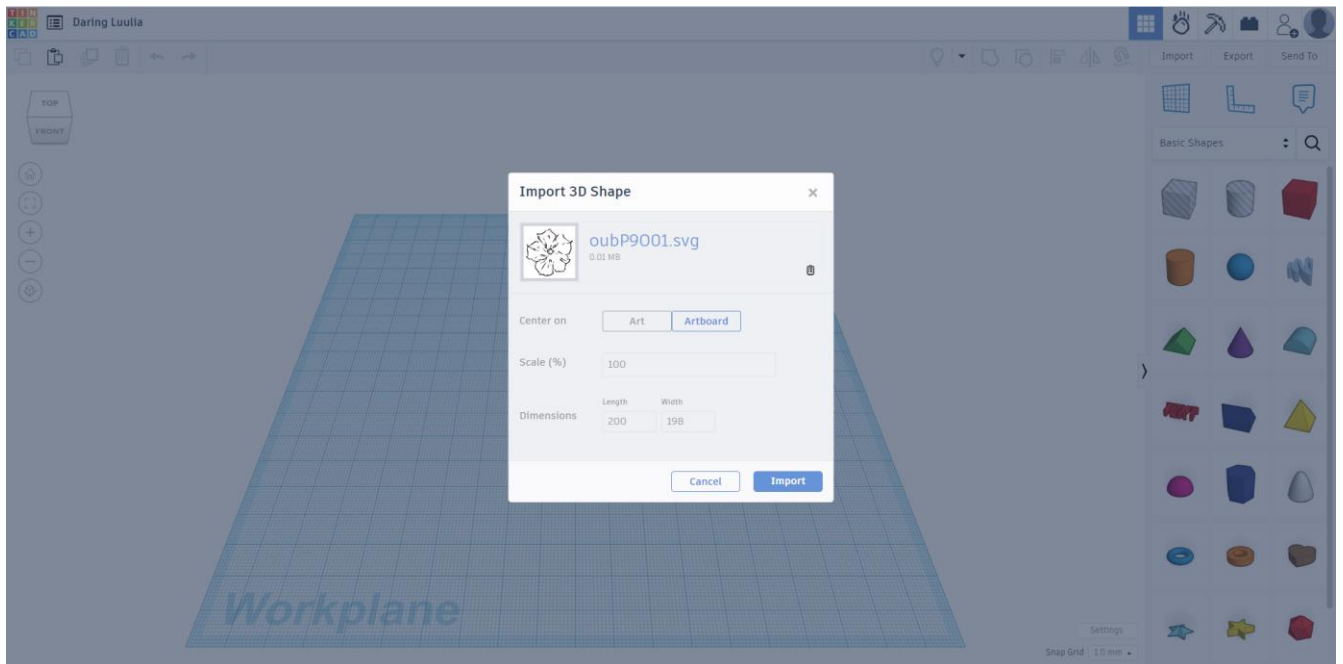

1. Take picture of hand drawing OR find a high-contrast photo online

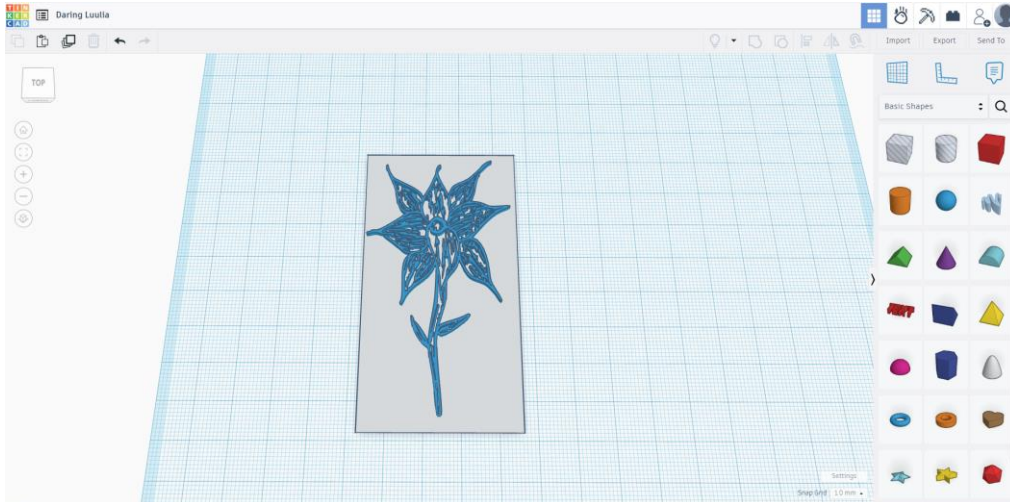

2. Convert the picture to a vector file on [PicSvg.com](https://picsvg.com)

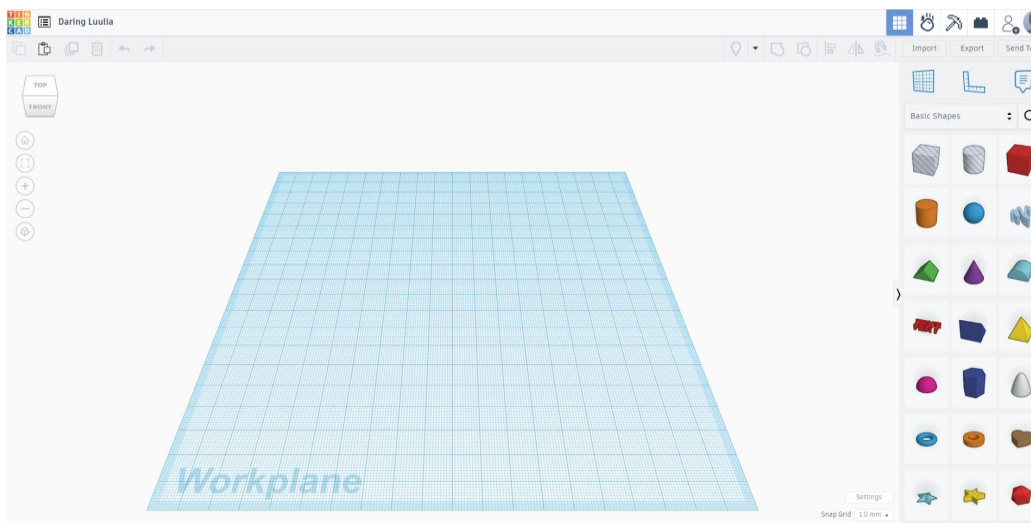

3. Import the .svg file into Tinkercad

4. Modify the model to your liking

5. Export the file as .stl

6. Import .stl file to ideaMaker, modify to your liking, and slice your model
