Charleston Medical Markers Research

Grant	\$10,000
Organization	City of Las Vegas
Year	2017
	<p>The Centennial Commission granted funds in the amount of \$10,000 to the city's planning department to hire North Wind Resource Consulting, a Cultural Resource Management Firm, to conduct research on the history of an area now referred to as the Medical District. The consultant provided a history of the development of medical facilities from the early 1900s through the 1990s along Charleston Boulevard between Martin Luther King Jr. Boulevard and Valley View Boulevard, including adjacent neighborhoods.</p> <p>The results of the research were intended to create historic markers highlighting significant buildings, people and events associated with establishing medical services in downtown Las Vegas. While the research was completed, the historic markers were not implemented.</p> <p>*I will scan and add the research material to our website – will add link soon as I have that.</p>
