

Project History

The city is studying appropriate roadway improvements along Washington Avenue and H Street as part of our larger package of Complete Streets improvements throughout the Historic Westside. Starting with development of the West Las Vegas Plan in 1994, through enactment of the HUNDRED Plan, the City has taken a visionary, community-led approach to revitalizing this historic area of our city. Incorporation of complete streets will bring safe, comfortable and attractive places for all users.

Project Location and Map

The project is located along Washington Avenue and H Street in the Historic Westside neighborhood. The proposed improvements along Washington Avenue are from Martin Luther King Boulevard to I-15 and along H Street from Bonanza Avenue to Owens Avenue.

Proposed Improvements

Complete Streets improvements along Washington Avenue and H Street will focus on enhancing the pedestrian environment through the installation of wider sidewalks, bike lanes, shade trees, enhanced bus stops, lighting, and curb extensions to make pedestrian crossings safer and shorter. School crossing pedestrian flashers are planned near the Historic Westside School. Improvements will mirror those completed along D Street and Jackson Avenue.

The city intends to use primarily federal funds for this project. The first step in the federal process is the National Environmental Policy Act (NEPA) review, necessary to evaluate environmental effects of a project before it is built.
